## DETAILED ACTION

### *Election/Restrictions*

1. Restriction to one of the following inventions is required under 35 U.S.C. 121:
  - I. Claims 1-16, drawn to the two reflecting surfaces are so arranged relative to each other and to the light source, classified in class 362, subclass 298.
  - II. Claims 17-27, drawn to subject matter having a surface which redirects incident light, classified in class 362, subclass 341.
  - III. Claims 28-33, drawn to subject matter wherein the reflector and refractor are spaced from each other, classified in class 362, subclass 328.
  - VI. Claims 34-38, drawn to defining a position for placement of an optical source, classified in class 353, subclass 87.
  - V. Claims 39-44, drawn to generating a two dimensional representation of a plurality of entry surface and a plurality of corresponding reflective surfaces, classified in class 353, subclass 99.

The inventions are distinct, each from the other because of the following reasons:

Inventions I, II and III are unrelated. Inventions are unrelated if it can be shown that they are not disclosed as capable of use together and they have different modes of operation, different functions, or different effects (MPEP § 806.04, MPEP § 808.01). In the instant case the different inventions groups I-III are unrelated because group I relates to an invention that utilize two reflecting surfaces are arranged relative to each other and to the light source that light from the source is reflected by one surface onto

the other, group II relates to an invention having a single reflector which redirects light from the light source, and group III relates to an invention that having a reflector and refractor are spaced from each other as a modifier.

Inventions VI and V are related as process of making and product made. The inventions are distinct if either or both of the following can be shown: (1) that the process as claimed can be used to make other and materially different product or (2) that the product as claimed can be made by another and materially different process (MPEP § 806.05(f)). In the instant case group VI relates to an image projectors with subject matter including means to movably position the light source, relative to a reflector or lens in the projector and group V relates to an image projectors with subject matter including a plurality of reflectors as there defined.

Because these inventions are distinct for the reasons given above and have acquired a separate status in the art because of their recognized divergent subject matter, restriction for examination purposes as indicated is proper.

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).

Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).
